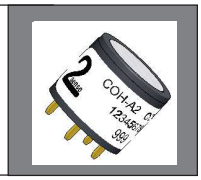
COH-A2

Carbon Monoxide Hydrogen Sulfide



Technical Specification

Introduction

Personal gas safety monitors can be found in most industries, with the requirement for multiple gas detection becoming commonplace. Most of these gas detectors measure both Carbon Monoxide and Hydrogen Sulfide.

Alphasense new 2sense H_2S+CO gas sensor allows designers to reduce significantly their gas detector size and cost. The 2sense uses a patented approach to dual gas sensor design and utilises our also patented low Hydrogen sensitivity CO electrode

A larger version of the D2 sensor, which has a proven track record in the field overmany years, the 2sense does not compromise performance or long term stability over the standard two-sensor solution when measuring both H_2S and CO.

Specification Carbon Monoxide Channel

PERFORMANCE	Sensitivity	nA/ppm in 400ppm CO	50 to 100
	Response time	t_{90} (s) from zero to 400ppm CO	< 35
	Zero current	ppm equivalent in zero air	-3 to +3.5
	Resolution	rms noise (ppm equivalent)	< 0.5
	Range	ppm CO limit of performance warranty	1,000
	Linearity	ppm error at full scale, linear at zero and 400 ppm CO	10 to 40
	Overgas limit	maximum CO for stable response to gas pulse	5,000
LIFETIME	Zero drift	ppm equivalent change/year in lab air	< 0.5
	Sensitivity drift	% change/year in lab air, monthly test	< 4
	Operating life	months until 80% original signal (24 month warranted)	24
ENVIRONMENTAL	Sensitivity @ -20°C	% (output @ -20°C/output @ 20°C) @ 100ppm CO	30 to 50
	Sensitivity @ 50°C	% (output @ 50°C/output @ 20°C) @ 100ppm CO	120 to 145
	Zero @ -20°C	ppm equivalent change from 20°C	0 to 5
	Zero @ 50°C	ppm equivalent change from 20°C	0 to -5
CROSS SENSITIVITY	Filter Capacity	ppm-hours of Hydrogen Sulfide	1200
	H_2S sensitivity	% measured gas @ 20ppm H_2S	< 12
	H_2 sensitivity	% measured gas @ 400ppm H_2 @ 20°C	< 8
	NO_2 sensitivity	% measured gas @ 10ppm NO_2	< 3
	Cl_2 sensitivity	% measured gas @ 10ppm Cl_2	< 0.1
	NO sensitivity	% measured gas @ 50ppm NO	< 100
	SO_2 sensitivity	% measured gas @ 20ppm SO_2	< 2
	C_2H_4 sensitivity	% measured gas @ 400ppm C_2H_4	< 60
	NH_3 sensitivity	% measured gas @ 20ppm NH_3	± 0.5
KEY SPECIFICATIONS	Temperature range	°C	-30 to 50
	Pressure range	kPa	80 to 120
	Humidity range	%rh continuous (see note below)	15 to 90
	Storage period	months @ 3 to 20°C (stored in sealed pot)	6
	Load resistor	Ω (recommended)	10 to 47
	Weight	g	< 6

Note: Above 85% rh and 40°C a maximum continuous exposure period of 10 days is warranted. Where such exposure occurs the sensor will recover normal electrolyte volumes, when allowed to rest at lower %rh and temperature levels for several days.

At the end of the product's life, do not dispose of any electronic sensor, component or instrument in the domestic waste, but contact the instrument manufacturer, Alphasense or its distributor for disposal instructions.

NOTE: all sensors are tested at ambient environmental conditions, with 47 ohm load resistor, unless otherwise stated. As applications of use are outside our control, the information provided is given without legal responsibility. Customers should test under their own conditions, to ensure that the sensors are suitable for their own requirements.

Performance Data
Carbon Monoxide Channel

Figure 1 CO Channel Sensitivity Temperature Dependence

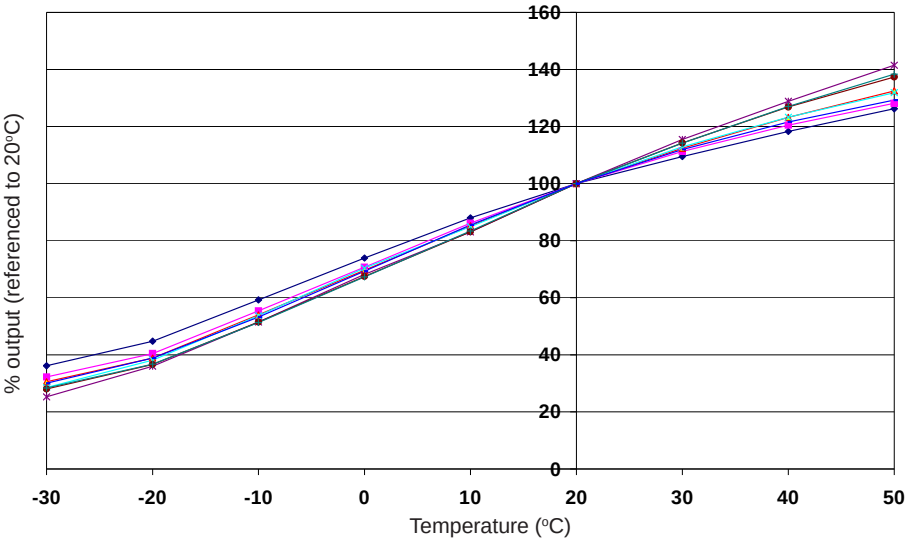

Figure 1 shows the % variation in sensitivity caused by changes in temperature.

The data is taken from a typical batch of sensors.

Figure 2 CO Channel Zero Temperature Dependence

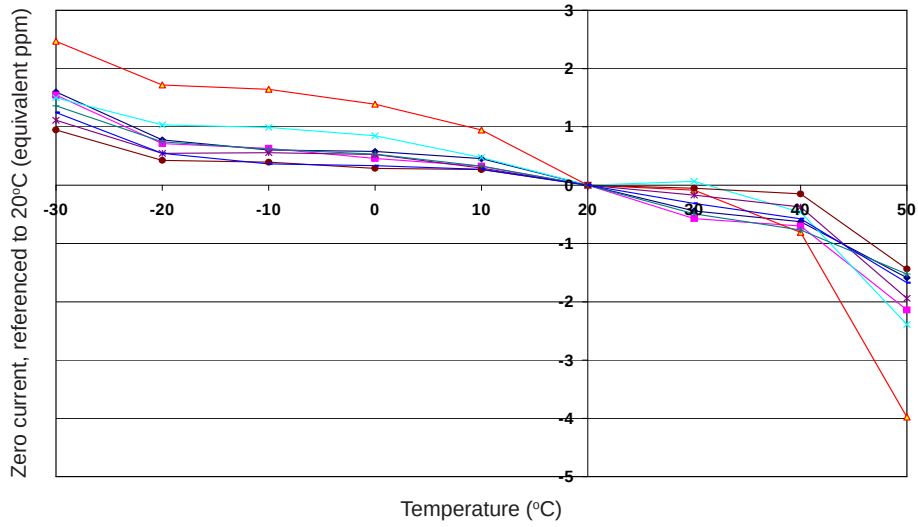

Figure 2 shows the variation in zero output caused by changes in temperature, expressed as ppm gas equivalent, referenced to the zero at 20°C.

This data is taken from a typical batch of sensors.

Figure 3 CO Channel Response to 800ppm CO

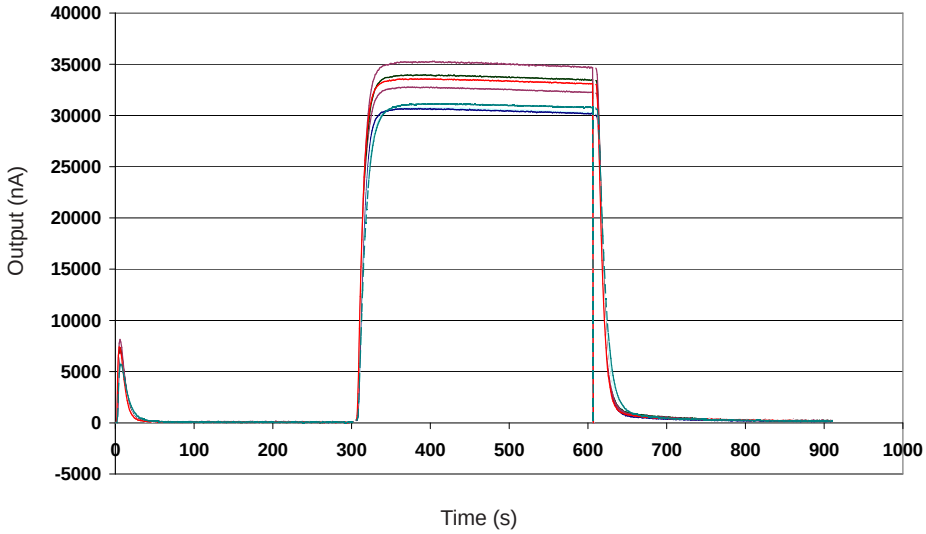

Figure 3 shows the response for a batch of sensors tested with 400ppm CO. The fast, stable response shows a robust sensor that operates well above its specification.
